PRODUCTION-READY · FRONTEND

PARTIAL · FULL-STACK

ONE-LINE VERDICT

Strong front-end knowledge (60/60 components scored at 91%). Backend coverage is shallow on 6/9 services. 13 of 15 platform registries are empty stubs. Greenlight UI work; defer full-stack feature delivery until registries + tests are in.

WHAT IS INSIDE

- 01 Executive dashboard — six headline scorecards + TL;DR
- 02 Readiness scorecards — frontend per-dimension bars + component status badges
- 03 Coverage charts — frontend / backend / business side-by-side
- 04 Gap severity + implementation confidence matrix
- 05 Final recommendation — greenlight · watch · block + top-5 next actions

READING ORDER FOR LEADERSHIP

Pages 1, 2, and 6 are sufficient for a 60-second read. Pages 3–5 carry the evidence for any deep-dive question.

Six numbers, one picture

TL;DR

Frontend knowledge is mature: 60 components scored, theme/token coverage at 96%, API understanding at 95%. Backend understanding has breadth (all 9 services baselined) but limited depth (only 3 deep). The biggest risk is empty platform registries (DTO, endpoint, validation, business rule) — these block reliable full-stack code generation. Test confidence at 70% is the lowest measured dimension and the only frontend metric below 88%.

Status legend

Frontend per-dimension + component status

FRONTEND READINESS BY DIMENSION

Where the brain is weakest

GAP SEVERITY BY SOURCE

Brain-level: knownUnknowns.severity · Platform: upgrade backlog P0=HIGH, P1=MEDIUM, P2+P3=LOW

Top-5 highest-risk platform gaps

ID	COMPONENT	ISSUE	SEVERITY
UP-3-02	popup	Focus trap missing (WCAG)	HIGH
UC-W02	wizards	4 wizards still on legacy stepper	HIGH
UC-P0-01	table	Primelcons residual in row-action button	HIGH
UC-W04	uploader	Primelcons residual (4 occurrences)	HIGH
UC-W01	tree	No per-row template / actions slot	HIGH

Implementation confidence matrix

Danger zone — high risk, low depth Watch zone Safe zone — high depth, low risk

What to ship now, what to defer

GREENLIGHT

Ship now

- Falcon UI component tasks
- Theme / token migrations
- Component API refactors
- Frontend bug fixes against 60-component knowledge base

WATCH

Ship with care

- Full-stack features touching commerce / charging / provisioning
- New PRD work in account / user / contract modules
- Anything depending on test coverage signal

HOLD

Hold or scope down

- Features needing API DTO / endpoint / validation registries
- Backend work on access / identity / templates / gateways
- Anything blocked by missing test suite

Top-5 next actions

#	ACTION	OWNER	PRIORITY
1	Populate the 13 stub registries from existing component/PRD/backend evidence	domain skills	HIGH
2	Land at least 1 *.spec.ts per Falcon UI core component (target test/a11y dimension > 70%)	frontend skills	HIGH
3	Extend backend per-controller deep coverage to access/contact-group/identity/system-gateway/core-gateway/templates	backend-api-understanding	MEDIUM
4	Adopt HIGH/MEDIUM/LOW severity in every PRD GAPS.md (replace narrative severity)	business-understanding	MEDIUM
5	Add a per-domain scan ledger under Brain Outputs/scan-metadata/ shared/context-output		MEDIUM

Closing

The brain is ready to drive Falcon front-end work at scale today. Closing the 13 empty registries and adding a baseline test suite are the two highest-leverage moves to unlock full-stack delivery. Recommend a focused 2-week sprint on registries + tests before greenlighting backend-heavy feature work.
